Tecforce Ltd

tried.tested.trusted

Tecforce is a specialist organisation providing expert solutions in corrosion, fatigue, and modification services across the industry. Our expertise extends beyond vehicle structures to both pressurised and non-pressurised components.

We offer comprehensive engineering and technical support, delivering tailored repair packages, procedures, drawings, finite element analysis (FEA), and third-party attestations.

We provide full turnkey solutions, from one-off projects to large-scale fleet-wide programs. Our services can be carried out either on-site at depots or within our shared facility, where we utilise our highly skilled teams. These teams include specialists in welding, non-destructive testing (NDT), and European Welding Engineers, ensuring seamless project execution. With extensive experience as both a lead and supporting contractor, we collaborate closely with all stakeholders to meet contractual requirements while enhancing project efficiency through smart management and process improvements.

Our commitment to excellence is reinforced by key industry accreditations, including BSEN 15085, 3834, RISAS, and RISQS, all integrated into our ISO 9001 quality management system. These certifications enable us to meet the high standards expected by ROSCOs, TOCs, OEMs, and light rail organisations. Tecforce is based in Litchurch Lane, Derby, and employs over 60 skilled professionals.

Recently, we proudly celebrated our 30th anniversary—an incredible milestone that has marked three decades of delivering industry-leading solutions. As part of this celebration, we have undertaken an exciting rebrand to reflect our continued growth, innovation, and commitment to our clients.
