SEP60 RAIL™

oil-water separator

designed for rail

RAIL FREIGHT TRAM

- No more waste contaminating the environment and tracks
- Typically lasts for 4-6 months based on 16 hours per day

COMPACT SIZE

SINGLE USE

QUICK FIT

The clean solution

The problem?

Currently rail fleets discharge the untreated condensate generated by their compressed air systems directly onto the track, causing ground contamination.

This needs to be reduced as a matter of urgency!

Easy to use

Simply click into place and attach the inlet and outlet tubes.

Once the unit has completed its normal working life, simply replace with a new unit and dispose of the old unit according to regulations.

How it works

The SEP60 Rail unit is filled with our unique **SILEXA™** filtration media which is made from environmentally friendly recycled glass bottles.

It has incredible performance with discharge levels at less then 5ppm!

The cost effective solution is here with the arrival of the **SEP60RAIL** filtration system from SEPURA™. The principle is simple: oily water in; clean water out, with discharge levels of less than 5ppm.

Designed for the efficient, cost-effective removal of hazardous levels of oil contaminated condensate, the compact, lightweight unit has been developed to meet EN45545-2: 2020 R6 HL1 & HL2 rail standards.

SEP60RAIL really is a winning solution for the rail industry with important environmental benefits - a milestone in the journey towards a cleaner future.

Who are Sepura™?

The revolutionary SEP60RAIL is the latest innovation from leading filtration specialist Bowman Stor - a UK company with an unparalleled reputation for the design and manufacture of world class oil-water separators, exemplified by its SEPURA™ range of DIBt approved air compressor condensate filters.

From single quick-fit units to mid-range and high capacity condensate cleaners, the globally-distributed SEPURA series enables businesses to meet their environmental standards with units to suit any industrial compressor installation.
